

mycozone

COMPOSITION

Each kg contains:

Bentonite-montmorillonite 300 g,
Mannan-oligosaccharides 300 g,
Artichoke extract and almond shell.

DESCRIPTION

MYCOZONE is a feed supplement for animal nutrition consisting in a well-balanced association of mineral and organic adsorbents in an almond shell vehicle enriched with artichoke extract **MYCOZONE** contributes to the well-being of the animal limiting the detrimental effects of the mycotoxins by binding the toxic agents to an adsorbent surface and eliminating them with the faeces. are toxic secondary metabolites of fungi commonly found on grains; if not properly eliminated cause a severe negative impact on the animals' health and performance.

Bentonite-montmorillonite is a phyllosilicate forming sheets that can retain water and organic molecules - as mycotoxins - as their sheets are mobile and expandable.

Mannan-oligosaccharides (MOS) link directly to 1,3- β -glucan and indirectly to 1,3- β -glucan. MOS contain a number of fimbriae-like glycoside-peptides (50-95 %) reaching out from the cellular wall, able to agglutinate the mycotoxins present in the digestive tube. **Artichoke extract** is used to stimulate the flow of bile from the liver. Traditional medicinal uses of artichoke pertain to liver function as choleric (bile increasing), hepatoprotective, cholesterol-reducing, and diuretic.

Almond shell: grounded almond shell as a vehicle that may also have absorbent properties.

RECOMMENDED USE

- Prevention of intoxication by mycotoxins, and especially aflatoxins in poultry.
- Prevention of decreased performance in poultry, due to intoxication of mycotoxins.

CONTRAINDICATIONS

Not described.

ADVERSE REACTIONS

Not described.

SPECIAL PRECAUTIONS

Do not exceed the maximum dose of 20 kg per 1000 kg of feed.

ADMINISTRATION

Oral use in feed.

Mix 0.5 - 2 kg per 1000 kg feed.

TARGET SPECIES

Poultry

WITHDRAWAL PERIOD

Zero days

STORAGE CONDITIONS

Store below 30 °C.

Protect from light.

Shelf life after first opening: 3 months.

SIZES

25 Kg
